My name is Tad Spencer, and I would be honored to be the next QA/QI Director. I've been in MERT since the spring of my freshman year, and I've been an EMT for the past year. I was accepted into the crew chief trainee program immediately after becoming an EMT, and was a part of the first 802 class under the new training program where I have received over 30 calls. I served as Webmaster/Scheduler this past term, and also spent a lot of time helping out with this year's EMT class. Before I was Webmaster, I was the Coding Projects Coordinator under Abhishek when he was Webmaster. I helped him to replace our paper forms with electronic versions, including the new member application and the crew chief trainee application.

In my computer science studies, I often deal with analyzing large amounts of data. This is very beneficial to the QA/QI position seeing as it is responsible for reading almost every chart that is created by MERT. Also, I plan on working closely with the training department to identify problems that we have in the field and then to address them to make sure that MERT is providing the best possible patient care. I also plan on working with Public Safety to continue to improve our dispatch system, both over the radio and via text message.

With my year of experience on EBoard in addition to my computer science knowledge and experience as an EMT, I am well qualified for the position and I am passionate to continue pushing the organization forward. Thank you for your consideration.
